

**27 May 2024**

**Objective:** Create a Conclusion section.

**Tasks Completed:**

1. Completed the Conclusion section, structured into five parts:
  - Summary
  - Key Insights
  - Implications for Researchers and Clinicians
  - Next Steps
  - Final Thoughts

**Next Steps:**

1. Refine the complete draft.
2. Collect additional experiment-based primary sources, particularly those involving human patients, and augment each section with more detailed evidence as necessary.
3. Arrange a Zoom meeting with Dr. Mansur to discuss progress and gather feedback. Need access to the locked journal articles.

**Conclusion:** The Conclusion section has been finalized, providing a comprehensive summary of the research findings and their implications. With the draft nearing completion, the focus now shifts to refining the content, bolstering it with additional evidence, and seeking feedback from my supervisor (Dr. Mansur) to ensure its readiness for submission.
