Objective: Create a comprehensive framework and outline for the research paper on the interaction between insulin and dopamine signalling, by answering guiding questions to shape the objectives and facilitate targeted primary source collection.

Tasks Completed:

1. Answered targeted questions or asked more to define the purpose, recent findings, and summary of the research paper in the abstract section.
2. Addressed background information on insulin and dopamine, their functions, dysfunctions, and brain actions in the introduction section.
3. Formulated questions and outlined main points focusing on insulin-dopamine interactions in specific brain regions in the main body section: Completed a total of 5 Main Points with 5 different brain regions involved in insulin & dopamine interaction.
4. Provided basic responses to guide the conclusion section, summarizing overarching conclusions, key insights, future research directions, and implications for clinical practice.

Next Steps:

1. Review and refine the basic responses to ensure accuracy, coherence, and relevance to the research objectives.
2. Conduct a **targeted** literature search to gather primary sources and additional references tailored to investigate the information and points discussed and noted in the framework.
3. Analyze the gathered information to synthesize coherent sections, providing clear explanations and interpretations of the data.
4. Seek feedback from Dr. Mansur to refine the framework and ensure its alignment with the research objectives.
5. Proceed with drafting the manuscript, incorporating the refined framework and integrating the gathered information into a cohesive narrative.

Conclusion: The framework and outline for the research paper on the interaction between insulin and dopamine signalling have been shaped through the completion of targeted questions, providing a structured foundation for subsequent phases of research and writing. By addressing key aspects such as purpose, background, main points, and conclusion, this framework sets the stage for a focused and systematic exploration of the topic, facilitating the collection of relevant primary sources and the development of a coherent and insightful manuscript.
